

FleetVU Customer Portal

The most advanced monitoring system in the industry. FleetVU provides large Enterprise customers with full geographically system hardware tracking combined with per site usage, throughput status, usage, bandwidth demand, charts, weather conditions at site and much more.

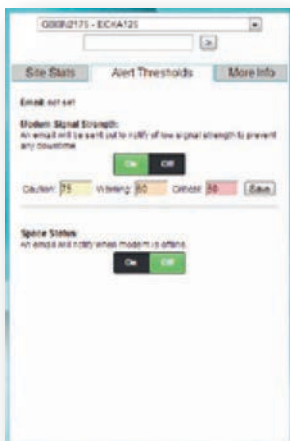

The **GALAXY**[®] **SKYNET** **FleetVU** tool enables our customers to access their network data at any time. IT managers and technicians can review usage and status on a per site basis. It is touch screen friendly so you can access it on your iPhone and other touch screen smartphones.

SKYNET - Bandwidth Management Services

- Historical graphing of a site's bandwidth usage: daily, weekly, monthly, and yearly
- Site status
- Monthly usage: showcases site usage over the given month and excess usage to be billed where applicable
- Local site weather
- Beam mapping

Pro-Active Alerts

- Our customers can set up this active service through email/SMS-based service plan alerts: notifications related to service plan limits and usage
- Core-Network Component Status
- Customized alerts are available that are built around desired uptime - Throughput, SQF

FleetVU

Portal with Mobile access for Smart Phones

Getting the real time status and fleet tracking into a mobile application is key for field managers and technicians - on the go monitoring with **FleetVU**

With iPhones and Android cell phones, the touch 'zoom and expand' feature makes accessing key information fast and easy wherever you are. The screen format provides users with a full view image that eliminates scrolling. Now you have all your fleet's information in the palm of your hand.
