

GALAXY® is your Enterprise Satellite Communication Solution. We build unique networks with a customer-centric focus, striving to surpass our competitors in reliability, innovation and cost effective solutions and to connect our customers wherever they go.

GALAXY® delivers reliability, affordability, flexibility and innovation, all with a “Can Do” attitude. We specialize in providing our Enterprise Network to **Oil & Gas, Mining, Government, Utilities, Retail, Emergency Response and Commercial Markets.**

GALAXY® delivers peace of mind with the **SKYDATA™** network. We are the Gold Standard of **network consistency**, providing mission critical data on one of the most advanced DVB-S2 and reliable technology in the world. Our hubs are fully redundant with automatic fail over switching for all critical parts.

GALAXY® delivers **SKYVOICE**, the best integrated VoIP phone service in the industry, sold with a data package or as a stand-alone. Our VoIP offers guaranteed bandwidth allocation for every call, delivering the “Best In Class” quality every time. We provide North American phone numbers (DID’s) that are **affordable, reliable** and work virtually anywhere.

GALAXY® delivers **rugged, field proven** hardware solutions that you can count on. Our **SKYWARE** products offer both fixed and mobile options featuring the **Sentinel** auto-deploy system manufactured exclusively for Galaxy by General Dynamics Satcom™.

GALAXY® delivers full access monitoring, customer support and VPN solutions with **SKYNET**. Through our **SKYNET FleetVU** you can view all of your critical network status and indicators.

Galaxy Broadband Communications

Galaxy is a leader in reliable, enterprise grade VSAT services to remote areas across Canada and the United States. Galaxy owns and operates two fully redundant DVB-S2 hubs. With 20 years of delivering communications via satellite, Galaxy's customer-centric approach to the VSAT market is straight forward and simplified. We deliver leading edge technologies quickly and economically while maintaining client Quality of Service (QoS). Utilizing geographically diverse uplink centers, Galaxy manages a Global IP infrastructure interconnecting remote VSATs directly to the core of major North American carriers with POPs in the USA and Canada.

Galaxy's service plan flexibility (dedicated or contended bandwidth solutions) combined with state of the art monitoring and manned 24/7 North American technical support centre provides a true enterprise quality service.

We offer a full range of satellite internet solutions and multiple applications such as: **VoIP, RoIP, Fax over IP, Fixed and Self-aligning** antennas and **VPN** services.

Our Technology Partners

The Galaxy hubs are uplinked and hosted out of **Telesat's** Toronto and Vancouver teleport facilities.

General Dynamics Satcom designs, develops and manufactures world leading satellite dish systems. Galaxy exclusively uses their hardware, including the new auto-deploy "*Sentinel™*" and fixed site Prodelin VSAT dishes.

Hughes, our modem manufacturer, is the world's leading provider of satellite broadband technology, having manufactured and shipped more than 2.5 million terminals to customers in over 100 countries, consistently maintaining a global market share of over 50 percent. Our products employ global standards.

Space Segment

Galaxy holds long term leases for space segment with satellite fleet operators to offer service to our coverage areas. Through our innovative designs, technologies and partnerships, Galaxy can provide worldwide solutions wherever your business takes you.
