

GALAXY[®]

Case Study: Manitoba Emergency Measures Organization

Reliable. Simple.

GALAXY Broadband Communications is a leading North American satellite communications provider that offers voice, Internet data, and managed services. **GALAXY** offers communications solutions that are designed specifically for rugged and remote applications. This gives you communications wherever you need it.

Every Moment Counts.

Manitoba Emergency Measures Organization required a remote communications solution for their mobile command trailer.

They needed reliable, robust satellite connection as they are often beyond the range of cellular networks. With peoples lives on the line every moment counts so a fast deployment and connection life saving services and real time reporting is mandatory.

They selected the Galaxy Broadband Communications high QoS KU band satellite network. Galaxy integrated the C-Com iNetVu A1200C auto-deploy 1.2m satellite system on Galaxy's enterprise TDMA network.

"It is simple to deploy and works transparently. Just one button and we are connected with fast, reliable, and predictable broadband connection".

- Ian Boughton, Situational Awareness Program Coordinator - Manitoba Emergency Measures Organization

Challenge:

MEMO needed a reliable connection because they are often beyond the range of cellular networks.

Solution:

GALAXY'S reliable, high QoS Ku satellite network was integrated with their current auto-deploy system.

Result:

The system is easy to use and simple to deploy, making it perfect for emergency situations.
