

GALAXY®

Introducing SmartSite, a total connected and managed solution

SmartSite delivers a complete integrated communication and network solution for remote campuses, offices, and camps. Now every employee or guest can be connected and use their applications that makes them more productive. In remote areas you can now connect all your office staff, production workers, morale users as well as machines and IoT devices.

SmartSite not only connects everything on site but manages it too. Galaxy manages your bandwidth consumption to lower cost and maximize the Quality of Experience (QoE). Our QoS ensures that your applications will run as expected and we prioritize your key traffic for the best remote user experience.

Integrated internal switching through the managed firewall, access points, and switches, the Galaxy **SmartSite** delivers a high performing, completely secured network. True next generation performance, monitoring, and support via Galaxy SkyCarrier and SkyDATA connections.

No worries, No headaches - just total site connectivity and management offering peace of mind.

The SmartSite Components

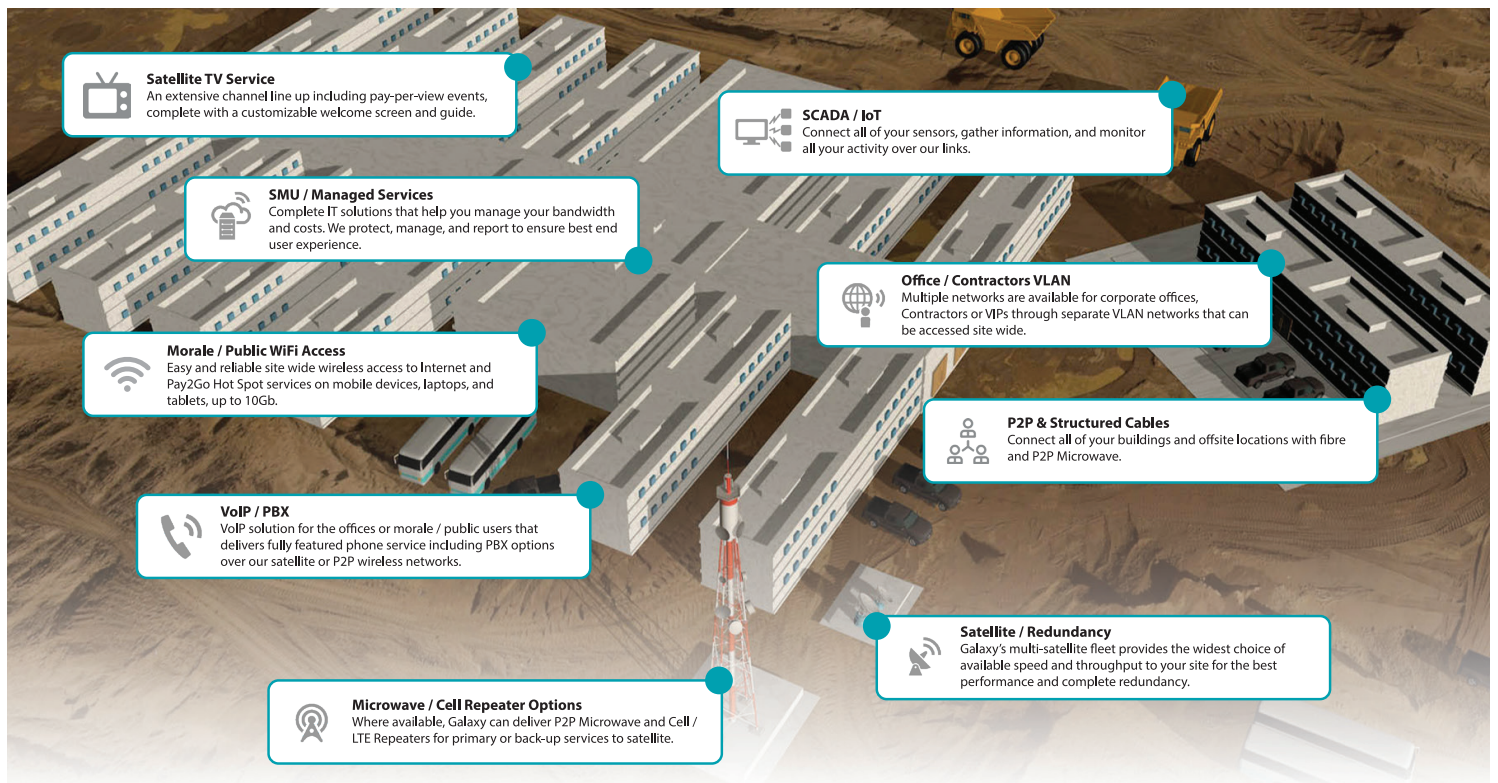

- Satellite connectivity, LTE, and Microwave for the optimal SD WAN service
- Complete WiFi Coverage for your site computers, tablets and handhelds
- Point To Point connections for extended service to out lying devices or users
- Multiple VLANs allows for separate Office, morale, contractor and SCADA networks
- Full PBX Phone Service provides call manager, extension calling and POE and cordless phones
- Pay2Go Hot Spots allows guests to purchase extra bandwidth when they need it
- SCADA/IoT Connectivity for instrumentation and devices
- Firewall and Best-in-Class Security for worry free user and network protection
- Bandwidth Management that maximizes the user experience and minimizes cost
- Satellite TV from Shaw provides the best choice, customized welcome screen, and Emergency Alert

Worry-Free Managed Solutions

Better, Faster, More Secure - Introducing the SMU 2.0 that manages your site

LAN built to handle the high-bandwidth requirements up to date with Millennial expectations.

More Features

DSCP Mapping - Up to 60% additional maps available to a project - at the same price

Firewall - World-class cyber security capabilities: all 9 NSS Labs rating, ICSA Cerf, and FIPS

Enhanced Reporting - Monitor bandwidth utilization: protocol breakdown provides more granular user utilization based on costs

Improved Deployment - One-touch appliance provisioning for simple and easy connecting

Morale and Public WiFi Access (Up to 10Gb) - Improved performance via integrated system design: indoor/outdoor radios and equipment flexibility with a seamless roaming WiFi experience

SLA - Increased uptime: better protected networks, fewer points of failure, high-availability equipment, increased monitoring, DDoS protection / web security

SD WAN - Application aware policies, SLA based link selection, prioritizes business applications with best in class link load balancing

Office User "End-Client" Management - Security rich, end-client management tool, corporate authentication integration for easy login setup
