

GALAXY®

Let Galaxy Broadband help with your mining operation challenges

SCOUT is a quick-deploy satellite antenna system for those who require a rugged, easily transportable communication solution complete with simple assembly and pointing procedures. Virtually anyone can be connected to the Internet within minutes. Available with low cost data plans and fully supported crystal clear and consistent VoIP phone service. A portable single box solution ideally suited for clients that are moving frequently in remote locations and require quick, easy, and reliable communications.

The SCOUT is specially designed to work on **GALAXY**'s new high power Ka-band satellite coverage in Northern Canada, offering customers an impressive Enterprise platform and the highest level of service and support 24/7. **SKYDATA** service plans offer a wide variety of enterprise services along with customizable packages to meet any communication need. Data, **SKYVOICE** phone service, Fax, and Radio over IP are all fully supported.

Why pay the high cost of satellite phones and BGAN data rates? Avoid paying the cost of remote installation!

The SCOUT quick-deploy is an all-in-one system with step-by-step instructions to help quickly and easily assemble, point, and commission the VSAT. Included with the system are all the necessary tools, instructions, network diagrams and VSAT hardware, along with a high quality VoIP router, phone and Wireless Access Point.

The SCOUT is well-designed for industries such as mining exploration, oil & gas, construction, disaster recovery, search & rescue, forestry, business continuity and other remote communication industries.

Whether you require service at a fly-in only location, or you are travelling in a pickup or ATV, the **SCOUT** is designed to do the job.
