

GALAXY[®]

Let Galaxy Broadband help with your remote operation challenges

More Than Just Bandwidth

Rapid deployment, fully redundant communication packages with integrated LTE, Wireless and VSAT capabilities banded together maximizes a cost effective & scalable solution for data, voice, and video delivery.

High availability and complete communication solutions for remote locations and operations across the entire globe. We are dedicated to proactively working with our customers, using the latest technologies, top quality managed networks & flexible pricing, to deliver "The BEST Solution for Your Communication Requirements".

Oil & Gas Solutions

UPSTREAM: Galaxy enables Producers to remotely & securely manage their operation. Providing satellite coverage for seismic jobs, along with live video of the drill bit piercing.

Exploration - Geophysical - Seismic Data - Live Drilling Video

MIDSTREAM: The latest tech helps keep Operators in compliance with recent Methane, H₂S & CO₂ Emissions Regulations. Our solutions allow remote data on pump and valve control, flow measurements, pressure and temperature monitoring, leak detection, and corrosion monitoring to be monitored and sent to a centralized location. Monitoring, sensing, and sending all of this data back to a head office (or field office) via satellite, can be critical to detect any areas of concern.

Production Data - Methane Detection - Pipeline Monitoring - Sensors

DOWNSTREAM: We have also integrated many new SCADA and IoT solutions. Connecting many types of machines in a network, allowing companies to benefit from knowledge of all operations regardless of region and gain from the efficiencies of digitized automation.

SCADA & IoT - Video Surveillance - Refinery Data Transfer

Additional Services

Camp Morale Services:

High-quality Internet access
& Television services

Field Services:

Team of in-house trained service technicians & services partners. Galaxy is proud to be COR, ISNetwork and Comply Works certified.
