

GALAXY®

Introducing GALAXY'S
Accelerator PRO, powered by **XipLink**

GALAXY'S is pleased to announce a new managed service offering of an integrated satellite WAN optimization and acceleration service through a technology partnership with XipLink. **GALAXY and XipLink** have worked at integrating the **XipLink** appliance into **GALAXY'S SkyCarrier** line of dedicated satellite WANs. **GALAXY'S** new **Accelerator PRO** service offering helps ensure clients are able to maximize their satellite link utilization and application performance through **XipLink's** software locally hosted technology.

Previously generations of optimization software have involved costly time-consuming setup and significant hardware appliance investment often running into the hundreds of thousands of dollars. **GALAXY** latest integrated service offering delivers a robust and cost-effective solution to maximise your internet service, all for a nominal setup fee and a monthly service charge surprisingly at a fraction of what has been previously available.

The **GALAXY Accelerator Pro** is fully managed and supported by **GALAXY** technical support and engineering team. This integration minimizes the impact to projects IT staff requirements.

Why the **ACCELERATOR PRO** service?

- Improves QoE end user experience by application.
- Cloud based apps: Microsoft 365, Google Apps etc. have noted significant QOE improvements.

 Microsoft 365

 SAP

 Google Cloud

- Squeeze more packets into the Galaxy SkyCarrier links: optimizing satellite bandwidth by using every available bit.
- Improve link usage by 25% (averaged optimization based on existing deployments)
- Managed Service: Supported internally by Galaxy Broadband in Mississauga, Ontario, Canada.

How XipLink optimizes Galaxy's SkyCarrier connections?

Advanced Quality of Service (QoS)

- Intelligent traffic shaping
- Hierarchical QoS classes
- Understands link state
- Configurable committed, maximum rates
- Bandwidth reduction for VoIP, Skype & small Packets

NEW

30-DAY TRIAL OFFER
GALAXY

ACCELERATOR PRO

CHALLENGE

Header and Payload Data Compression

- Dramatic bandwidth gain
- Reduces the number of packets
- Bandwidth reduction for VoIP, Skype & small packets

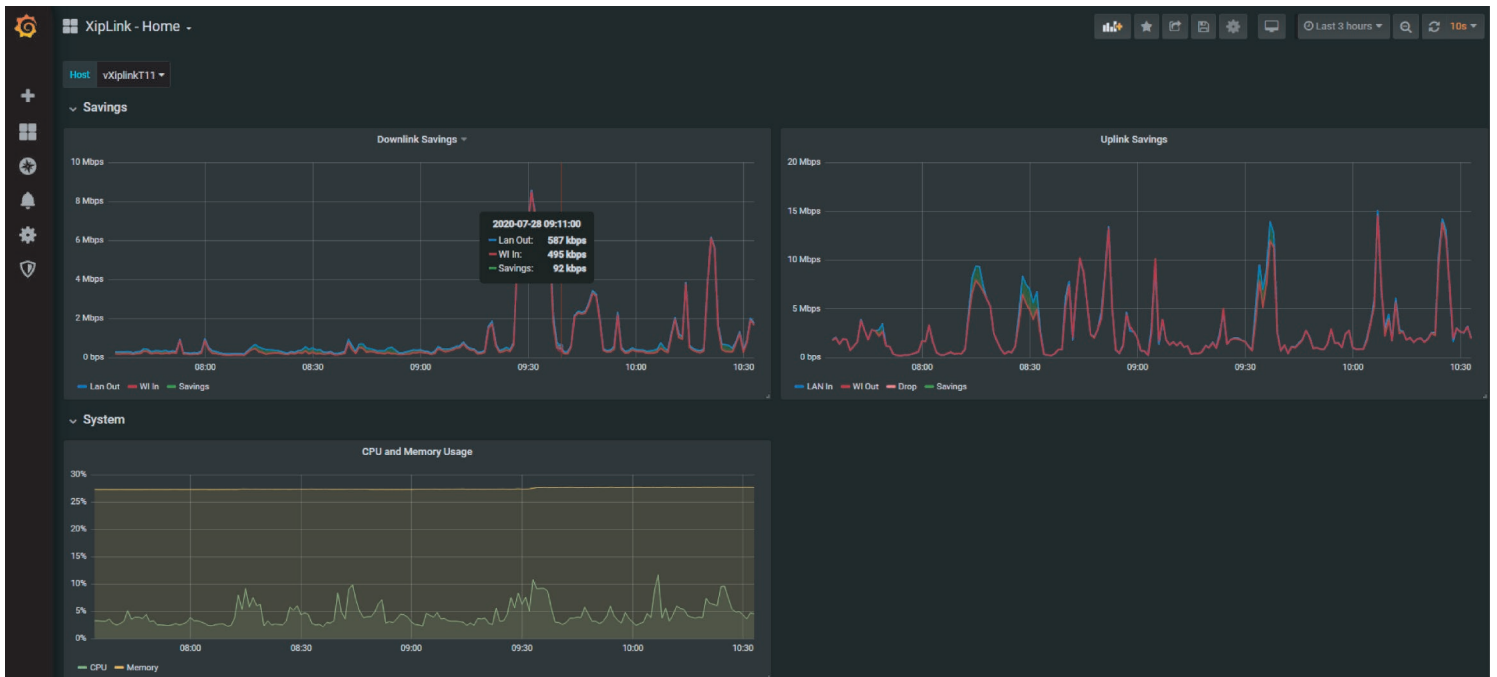

Byte Cache

Dramatic data reduction for multi-pass traffic

- Effective on viral videos, Internet content, etc.
- Up to 80% reduction from most traffic types
- IP-layer: Effective for both TCP and UDP traffic

SCPS-TP based TCP acceleration

- Interoperable PEP (I-PEP) compliant
- Transport Control (XTC) Modes
- Enhanced TCP
- Fixed Rate Control
- Dynamic Rate Control
- Delay-Based Rate Control

Ask us today about the *ACCELERATOR PRO CHALLENGE*.*
We are so confident you will love this service that *GALAXY* is offering a
***FREE 30-DAY TRIAL* to show you the amazing difference it will make.**

Galaxy will not charge the setup costs until you have agreed to continue the service at the end of the 30 day free trial!

*Accelerator Pro Challenge ends Sept 30th, 2020
